

MTH 1030—tutorial for week 2

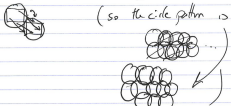

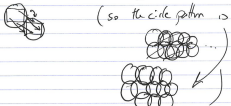

Alex Elzenaar

alexander.elzenaar@monash.edu

- Email me about things like incorrectly entered grades.
- General course queries should go on the Moodle forum (you can also email me but my primary job is **not** teaching & I will likely direct you to Moodle or the lecturers unless it is a very easy question).
- Requests to attend different tutorials should go to Eileen, her email is on Moodle. It is not in my power to deal with such things.
- Requests for compassionate consideration (eg assignment due date extensions) go via the university wide form linked on Moodle. Again I do not have authority to deal with queries about this.

What my research looks like

- ⑦
- These figures remind us of some work reported in *Math. Krushkal, Apanov, Gusevskii* (Abd. Akad. SSSR '81, Ann. trans. '86) from an earlier work of Wieland (1978).
 - Thm. The group generated by  (so the circle pattern is )
 - Butler don't apply, as a subgroup of $\text{PSL}(2, \mathbb{C})$, to $\pi_1(S^3 \setminus (\bigcirc))$. (Note, a ring pattern.) (Not by, by Markov right!)
 - Not a coincidence!
 - Thm (e.g. Thurston). For almost any knot $K \subset S^3$, there exists a discrete faithful repⁿ $\pi_1(S^3 \setminus K) \rightarrow \text{PSL}(2, \mathbb{C})$ that arises from a pattern of overlapping circles in $\mathbb{R}^2$.

- 1 Whiteboard markers, erasers, etc are in the box at the front. **If you find a marker that does not work, don't put it back in the box!!!**
- 2 Get into groups of 3-4 people. Write your **preferred names** on the whiteboards so I can take attendance.
- 3 Work on the questions **in your groups**. **Write your full thinking** on the boards, not just a final answer. You are graded in assignments/projects and the final exam on your reasoning and explanations, not just a final answer. If you don't practice in tutorials then I can't give any feedback before it starts to count for your grade.
- 4 Try to keep screen use to a minimum. It's OK to look things up in the lecture notes but most of your time you should be at the whiteboard writing and talking to people. I am here to answer any questions about the content/questions, and I will be walking around, it is hard to help you if you are working on a screen and not the board.
- 5 We will start to pack up for the quiz about 30min before the end.

Quiz

- 1 Please erase everything except your names so I can check attendance.
- 2 You are not allowed to have anything open on your computer except the quiz. Including NO additional tabs open. Phones should be face down if they are not in your bag.
- 3 When you have submitted the quiz put your hand up, when I have seen the submission screen I will check your attendance off. **If you leave without me seeing you have submitted the quiz you will not get an attendance grade.**
